

This second edition of An Introduction to Plastics is the answer to manifold requests for an updated version by the readership. Since publication of the first edition in 1993, the field of plastics has seen tremendous development. Their manufacture and properties are discussed and correlated to the molecular and supermolecular properties of polymers. The contents have been thoroughly revised, restructured and enlarged. Several topics such as polymer composites and mixtures, morphology, flow properties and processing have been given more space, and chapters on electrical conductivity and non-linear optical properties have been newly added. Reviews of the first edition: This book presents a precise, yet non-mathematical introduction to plastics, their raw materials, syntheses, properties and applications. (B. Sillion, Revue de l'Institut Francais du Petrole) The volume is excellently written, with a simple, straightforward and comprehensive index. It provides an overview of all plastics, including raw materials: manufacture, structure, processing, properties and, of course, applications (D.W. Taylor and J.F. Kennedy, Polymer International) This book has all the earmarks of becoming a guide to or even a reference book for polymers in structural applications (Willi Kreuder, Acta Polymerica)

Like a Straw Bird It Follows Me: And Other Poems (The Margellos World Republic of Letters), Near Midnight: A Gracy Midnight Book (The Gracy Chronicles 1), Crevices of Beautiful Minds, Crevasses of Beautiful Souls, Logistik 2: Netzwerke, Systeme und Lieferketten (VDI-Buch) (German Edition), Performance and Control of Electrical Machines, The Complete Works of William M. Thackeray (Pendennis), Classic Poetry of Azerbaijan: An Anthology, North Foreland To Holy Island (The Fishing Industry Through Time),
