

Excerpt from Catalogue of Edison-Lalande Batteries: Battery Motors, Measuring Instruments, Medical Apparatus, Etc Where it is practicable, always make the solution in some large earthenware vessel, and allow it to get quite cold before setting up the battery. Remove any scum from the surface of the solution before pouring on the oil. Stir the solution frequently while the caustic is dissolving. It is most important that the oxide plates should be entirely submerged in the Caustic Potash solution, so that the top edge of the oxide plate should be at least one inch below the layer of oil. It is also of vital importance that the oil should not be omitted. When oil is not used, creeping salts form, and the life of the battery is reduced fully two-thirds. Before immersing the plates in the solution, put them in water until they are thoroughly wet. This prevents any oil adhering to them, as they pass through. If this is not done, a film of oil covers the plates, and it is some time before they will work to their full capacity. Complete directions for charging are sent out with every cell. We wish to call particular attention to the fact that when the zinc is consumed, it is also necessary to renew oxide plates and solution. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
