

Metallurgy and metallurgical engineering have defined man, the toolmaker, from the earliest days of civilization. This book focuses on the science of metallurgy for the craftsman, trades, beginning engineer, engineer-in-training, hobbyist, blacksmith, and technician. It is written as much to inspire as to educate. Written for the non-engineer, it takes the reader into science of metallurgy to form a foundation in ferrous and non-ferrous metals. It teaches from the shop floor versus the academic classroom, yet it does not overlook the fundamental scientific principles. It is a college level text that is full of practical applications, and it assumes not previous knowledge.

Electric Arc Welding (Classic Reprint), Panthers Diary, Design Features to Achieve Defence in Depth in Small and Medium Sized Reactors (Smrs) (Iaea Nuclear Energy Series), Electrotechnology in Mining (Advances in Mining Science and Technology), How To Design & Install Plumbing 2ND Edition, Histoire De La Langue Romane: Roman Provençal (1840) (French Edition), The Liquid State and Its Electrical Properties (Nato Science Series B:), Programmable Logic Controllers, Sixth Edition, Public Meltdown: The Story of the Vermont Yankee Nuclear Power Plant,
