

Fundamentals of Survey Measurement and Analysis

This introduction to the analysis and assessment of survey data presents the fundamental principles of measurement, error, the precision of data, reduction of systematic errors, and adjustment. The application of statistical principles to surveying and the treatment of random errors is set out enabling the reader to process data in a useful way. Written primarily as a textbook for students studying for degrees in land surveying and civil engineering, the book is also of value to surveyors and engineers in practice.
