

Introduction to the Physical Metallurgy of Welding deals primarily with the welding of steels, which reflects the larger volume of literature on this material; however, many of the principles discussed can also be applied to other alloys. The book is divided into four chapters, in which the middle two deal with the microstructure and properties of the welded joint, such as the weld metal and the heat-affected zone. The first chapter is designed to provide a wider introduction to the many process variables of fusion welding, particularly those that may influence microstructure and properties, while the final chapter is concerned with cracking and fracture in welds. A comprehensive case study of the Alexander Kielland North Sea accommodation platform disaster is also discussed at the end. The text is written for undergraduate or postgraduate courses in departments of metallurgy, materials science, or engineering materials. The book will also serve as a useful revision text for engineers concerned with welding problems in industry.

Basic Mechanical Drawing, Designers Guide to EN 1992-1-1 and EN 1992-1-2 Eurocode 2: Design of Concrete Structures. General rules and rules for buildings and structural fire design (Designers Guide to Eurocodes), Refrigeration and Air Conditioning Technical, Biomedical Applications of Immobilized Enzymes and Proteins: Volume 2, Welding of high strength steel(Chinese Edition), Operation, Care, and Repair of Farm Machinery: Practical Hints For Handymen, Biocompatibility in Clinical Prac Vol 2, Welding Technical Manual TM 1-430, The Farmers Boy; A Rural Poem, Fundamentals of Drafting Technology,
