

# Marine, Offshore and Ice Technology: Proceedings of the International Conference on Computer-aided Manufacture and Operation in the Marine and Offshore Industries and Ice Technology

This work is divided into two parts. The first section covers ship hydrodynamics, computational fluid dynamics (CFD), ship design, ship and offshore structures, ship motions, manoeuvring and control, ship simulation, and ship propulsion. A bridging section on vessels and structures in ice leads to the second part which is devoted to ice technology. This part covers ice properties and modelling, as well as ice and ocean interaction.
