

Smart Polymers for Bioseparation and Bioprocessing

Smart Polymers for Bioseparation and Bioprocessing addresses an entirely novel theory that advocates a much more active role for smart polymers than has previously been envisioned, and therefore focuses on the role of these smart polymers within bioseparation. With contributions from the leading researchers working on smart polymers and their applications, this volume offers a comprehensive overview of both the current state-of-affairs within this research field and the potential for future developments. This book will be of interest to those working on techniques of bioseparation and bioprocessing, polymer chemists developing new smart polymers, as well as graduates in biotechnology.
