

The Engineering Guide to LEED-New Construction (Green Source): GreenSource Books

Acquire the skills needed to apply the LEED-New Construction rating system to any green construction project. The Engineering Guide to LEED-New Construction provides a solid understanding of the U.S. Green Building Councils LEED-NC rating system, explaining step-by-step how to apply it to real-world construction projects. This much-needed reference offers practical discussions of the main concepts of sustainability, and also presents detailed equations and exercises that can be used to perform the calculations outlined in LEED-NC. You will find authoritative information on sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, innovations in design, a systematic view of green and many other topics related to sustainability in construction. A valuable tool for the office or job site, The Engineering Guide to LEED-New Construction features: A practical focus on the LEED-NC rating system and how to apply it. Numerous exercises and equations that can be used to perform the calculations outlined in LEED-NC. Expert guidance on the main concepts of sustainability. A wealth of information on innovation in design. Inside this Cutting-Edge Guide to Sustainable Construction: Introduction to the U.S. Green Building Councils LEED-NC Rating System. Sustainable Sites. Water Efficiency. Energy and Atmosphere. Materials and Resources. Indoor Environmental Quality. Innovation in Design. A Systematic View of Green Department of Defense Sustainable Construction. Low Impact Development.
