

Basis of Hydraulics (Chinese Edition)

The book is divided into 13 topics, including: basic characteristics and the physical and mechanical properties of the liquid, the hydrostatic pressure, the calculation of the hydrostatic force in flat wall and curved wall, the basic principles of the movement of water, the water flow patterns and the head loss, head loss calculation, short tube calculation, simple long tube calculation, and nullah constant uniform flow, nullah constant non-uniform flow, curve analysis and calculations of the water, the design calculations of gate orifice flow and weir flow, downstream flow cohesion and energy dissipation of hydraulic structures.
